14.12 I am running on Windows 7 Professional 64-bit and my graphics driver is the AMD FirePro W5100. A: Had the same issue. The problem is that you have not installed correct power management on your GPU. You can download the.inf file from microsoft and install it manually. 1. Field of the Invention The present invention relates to a novel kind of optically active polysiloxane, which is used as an active material of a polarizing element and is excellent in absorption ability. More particularly, the present invention relates to a novel optically active polysiloxane that is capable of exhibiting excellent absorption ability and of having a highly reduced change in optical properties by heat or humidity in a long period of time. 2. Description of the Prior Art Polarizing elements, in general, are thin elements for selectively reflecting only a linearly polarized light component having a particular polarization direction in a non-polarized incident light and, at the same time, transmitting the light component having a polarization direction orthogonal to that of the non-polarized incident light. Therefore, the polarizing element is widely used in various optical devices and optical systems for selectively reflecting the linearly polarized light. The polarizing element is generally classified into two types. In one of them, the linearly polarized light, that has been reflected from the polarizing element, is again subjected to the non-polarized incident light to change its polarization direction by use of the second incidence of the light. In the other of them, the non-polarized incident light is subjected to the reflection from the polarizing element to change its polarization direction to form a linearly polarized light. The polarizing element used in the former type of polarizing element is required to exhibit a great change in polarization ratio in response to the change in the intensity of the non-polarized incident light. As such, the polarizing element used in the former type is required to have a greater absorptivity to the non-polarized incident light. In order to satisfy such requirements, a polarizing element having a multi-layer structure is disclosed in Japanese Laid-open Patent Publication No. 63-180652. More particularly, the publication relates 82157476af
